

IN THE SPECIFICATION:

Please replace the following paragraphs of the specification as filed:

[0017] Server 110 is shown communicating client systems 115/120 via network ~~155~~ 105.

Server system 110 is a data processing system server, configured to communicate with multiple different client systems, including client systems 115/120 and others.

[0019] Figure 2 depicts a block diagram of a data processing system in which a preferred embodiment can be implemented. The data processing system depicted includes a processor ~~102~~ 202 connected to a level two cache/bridge 204, which is connected in turn to a local system bus 206. Local system bus 206 may be, for example, a peripheral component interconnect (PCI) architecture bus. Also connected to local system bus in the depicted example are a main memory 208 and a graphics adapter 210.

[0026] Preferably, access to myCOE is role specific with additional options only available to specific classes of users. For example, access to myCOE usage can be made only available ~~to managers~~ to managers. myCOE provides user selectable application deployment via an on line menu. Selectable applications include applications (e.g., Microsoft Office Software, Client Specific Applications, Lotus Notes, Microsoft Exchange mail, etc). The ~~ala a la~~ a la carte system provides a more flexible alternative to the traditional fixed PC load approach supporting multiple new desktop models, e.g., traditional desktop, thin-client, or browser-based as required. The disclosed system ~~Allows~~ allows companies to choose how they evolve their services, where some might move to completely thin-client, while others need lots of mobile access. Further, this can be provided to sections of the company via the role based approach.
